QUALITY AND TRADITION

Gorenje has been producing high-quality home appliances for over 60 years. It is committed to development of own technologies and to continuous improvement of its production processes. Drawing on Slovenian tradition and European values, Gorenje remains among the leading home appliance manufacturers in Europe. We are proud of every product that leaves our factories as we are aware that it was produced and tested to meet the stringent European environment protection standards.

WE MAKE IT SIMPLIFIED. YOU MAKE IT PERFECT.

Freestanding Cookers

Ready to introduce some delicious moments to your kitchen? With the **new Gorenje HomeMade cookers**, this becomes charmingly simple. Prepare your favourite food just like in a traditional wood-burning oven or impress your family with a range of tasty experiences. We designed our cookers with **smart** and **user-friendly solutions**, so you can rely on them and just add your final touch.

HomeMade shape

All the qualities of baking in wood-burning ovens

The characteristic rounded shape is one of the most beneficial features of Gorenje cookers. Inspired by traditional wood-burning ovens, it enables hot air to move around freely. Since the food is

heated evenly and from all sides, it is always perfectly done: crispy on the outside and juicy on the inside.

SuperSize

Ready for XXL recipes

Gorenje cookers offer enlarged baking surface and use of extra big trays. Innovative solutions enable optimised energy consumption and evenly cooked food, regardless of the quantity. Full oven width is efficiently used while superior technology makes sure the food is evenly done on all levels.

BigSpace

More space for greater cooking freedom

The increased capacity of the oven (up to 70 litres) allows preparing bigger quantities of food at the same time. The optimised airflow circulates inside the oven completely freely and with their BigSpace cavity Gorenje cookers can easily accommodate even a huge turkey.

TouchFree coating

Shiny and fingerprint-free finish

All stainless steel surfaces are coated with a special TouchFree film that prevents fingerprints markings, leaving the surface always shiny and making cleaning much easier.

OpenView

Excellent overview

Advanced and even double lighting featured in some models of cookers enable clear view of the large oven cavity. Combined with special design of the glass door, this brings excellent overview of the baking process.

XXL Storage drawer

Everything neatly within reach

A specially large and deep drawer for storing larger cookware or cooking utensils. Trays, baking pans, tableware - have everything you need at hand with this convenient and spacious storage solution.

GentleClose

A soft touch is enough

Only a soft touch is needed to close the cooker door smoothly, without any noise.

SilverMatte

Ultra resistant, ultra smooth coating

Enamel quality and type are exceptionally important for the cooker and its operation. SilverMatte is a highly resistant and strong material that can stand extreme heats. Free from micro pores, it coats oven cavity surfaces and baking trays, making them resistant to the highest temperatures. The coating of the interior supports heat reflection and provides additional insulation. Therefore, the oven interior always stays sterile and safe.

Mechanical door lock

Always on the safe side

A mechanical door lock on the oven door prevents opening during usage and thus makes the cooker even safer, especially when you have kids around. This lock is enclosed to the oven, so you can install and remove it as needed.

AquaClean

Simple, casual cleaning

Due to special high-quality enamel, AquaClean function brings even more efficient and user-friendly way of cleaning the oven cavity. All it takes is to pour half a litre of water into a baking tray and turn AquaClean on after each baking. In just 30 minutes, the results are visible on the entire surface and the baking trays. Stains and grease are softened and can be wiped away easily with a soft cloth.

SmartDoor Switch

SmartDoorSwitch automatically turns off the fan and all heaters when the oven door is opened during the cooking process. This prevents the blow of hot air from the oven cavity. When the door is closed again, heaters and the fan resume the baking process.

Smooth oven door

Simply removable oven door is free of any notches or edges that could harbour dirt, making cleaning quick and easy. Innovative design allows quick and practical removal and cleaning also the space between the glass layers.

ChildLock The kitchen as a safe environment

ChildLock option is excellent for those who have children at home. Leaving them in a kitchen unauthorized has never been safer, since this option prevents them from resetting any parameters or changing settings on display.

Special Programmes

Stay Warm Staying perfect for the latecomers

The StayWarm function keeps food at a constant temperature of 70°C until the time is right to serve the meal. The food retains its original flavour and temperature until it is served.

Defrost

In order to keep the food in perfect condition even after defrosting, it is very important to thaw it quickly and that the heat penetrates the core evenly and simultaneously. Safe defrosting is made possible by the defrost program. Use of a drip tray will also prevent undesired drops or spills of liquid. Place the frozen food on the oven rack in the middle of the oven. The drip tray placed into the lower guide will catch the dripping liquid.

Plate Warming Serve professional dishes in the comfort of your home

Warmed plates prevent the loss of flavour and ensure that food tastes every bit as good as it should: from soups to pastas and steamed vegetables. WarmPlate will keep your crockery at precisely the right temperature at 60°C. Enjoy professional service in the privacy of your home.

PERFECT TASTE WITH SPARK OF CREATIVITY

Gas Cooktop

Cooking like a chef can be simple. All it takes is a creative spark as Gorenje cooker with gas cooktop will take care of everything else. With its big surface, powerful burners and advanced features, it offers support for your wildest cooking endeavours. Ignite your inspiration and surprise your loved ones with perfect home-made dishes.

 **Wok Burner**
Powerful cooking, great authentic taste

New wok burner with special shape of gas crown directs flame directly to wok and enables even more powerful cooking with up to 4.0 kW power. Asian cuisine, vegetables and other dishes have never been so crisp and delicious, yet done so quickly.

 **ChefBurners**
More powerful and efficient cooking

New high-efficiency ChefBurners provide more efficient gas consumption and enable faster and eco-friendlier cooking. Different sizes of burners give you full flexibility, while their user-friendly positioning enables easy and safe cooking.

Big surface

Plenty of space for every pan or pot

Enlarged cooking surface (up to 20%) and longer distances between burners offer plenty of space for all sizes of pans and pots. Sleek and flat design allows easy sliding and using very big pots without disturbance, with perfect stability for all your cooking adventures.

Cast iron ProGrids

Strong, stable and durable support

Massive and elegant cast iron ProGrids are extremely stable and resistant even to the highest temperatures. They bring superior stability, durability and user-friendly design to your kitchen.

VARIETY OF HEATERS FOR BEST COOKING RESULTS

Hi-Light cooktop

Gorenje hi-light cooktops are designed as an easy-to-use tool that enables everyone to cook with great results. Efficient and smart, hi-light hobs are equipped with features that make cooking effortless. They offer double or oval cooking zones for best fit to your needs. With special features like residual heat indicators, timer and smart control they provide perfect control of the process and bring maximum safety.

PERSONAL FACTORY OF PERFECT TASTE

Ovens

Every Gorenje oven is a little wonder factory. A thousand physical processes take place in it, all controlled and perfectly coordinated to the end result - delicious food. Years of ambitious research into the physics behind baking, roasting and steaming have led to a wide range of features and functions that offer a unique cooking experience. These ovens are helpful personal assistants with a talent for details: an innovative shape that distributes hot air evenly, a monitoring device that cooks meat to perfection, a steaming tool that brings in just enough moisture. There are many interesting configurations to choose from, all of which are exceptionally user-friendly.

HomeMade shape

All the qualities of baking in wood-burning ovens

The characteristic rounded shape is one of the most beneficial features of Gorenje ovens. Inspired by traditional wood-burning ovens, it enables hot air to move around freely. Since the food is heated evenly and from all sides, it is always perfectly done:

crispy on the outside and juicy on the inside. Combined with the MultiFlow 360° ventilation system, it makes baking on all 5 levels possible.

MultiFlow 360°

All sides are good sides

MultiFlow 360° guarantees the optimal circulation of heat within the oven. Due to smartly positioned ventilation openings on the back wall and the unique round shape, air is spread evenly throughout the oven. The fan pushes hot air around the entire oven volume, making the food perfectly baked on all sides. The dynamic air movement allows simultaneous baking on many levels without smells and flavours mixing together.

Multi-level baking

Many dishes in one go

Combination of MultiFlow 360° and HomeMade shape helps reach the toughest objective: preparing five trays of dishes at once. The good news is: the flavors and smells don't mix. Smart air distribution ensures that the food is evenly baked on every level. Since the oven volume is larger, the overview is excellent as well. Superior models enable arranging the baking trays on five different levels.

AutoProgrammes

Select, touch, done

Gorenje ovens provide fully automatic cooking programme with over 80 recipes to choose from, ideal for beginners. The secret of auto mode is quite simple – all the parameters such as time, temperature, heaters, are automatically set. All that the user needs to do is choose the dish type and weight and press start. The oven will do the rest.

Step by step

Perfect food in 2, 3 or more steps

Cooking in phases is achieved by manually programming the many steps of the baking process. Throughout all the steps of the automatic cooking process there is no need to change the settings manually. It is also ideal for more experienced users and for dishes like bread and lasagne, which need temperature changes.

SilverMatte

Ultra resistant, ultra smooth coating

Enamel quality and type are exceptionally important for the oven and its operation. SilverMatte is a highly resistant and strong material that can stand extreme heats, even pyrolytic cleaning at 500 °C. Free from micro pores, it coats oven surfaces and

baking trays, making them resistant to the highest temperatures, microwaves and steam. The triple coating of the interior supports heat reflection and provides additional insulation. Therefore, the oven interior always stays sterile and safe.

CataClean

A surface that stands no grease

Catalytic cleaning represents a great assistance in oven maintenance. When the oven reaches 85°C or more during the baking process, catalytic panels automatically start absorbing the grease and impurities.

AquaClean

Simple, casual cleaning

Due to completely new enamel in all lines of new Gorenje ovens, AquaClean function has been significantly improved. AquaClean offers great assistance in cleaning of the oven cavity. All it takes is to pour half a litre of water into a baking tray and turn AquaClean on after each baking. In just 30 minutes, the results are visible on the entire surface and the baking trays. Stains and grease are softened and can be wiped away more easily and the oven stays spotless.

BigSpace

More space for greater cooking freedom

The new generation of Gorenje ovens conceals a shape within the upper part. Now the optimised airflow circulates inside at an even greater volume, circling completely freely. The increased capacity allows preparation of larger baking trays and larger quantities of food, while their outside dimensions remain the same. Instead of the previous 3, the Superior oven now enables using 5 levels at the same time. Capacities range up to 75l in standard ovens and up to 53l in microwave ovens, which is amongst the largest available on the market.

GentleClose

Super easy and super silent

Only a soft touch is needed to close the oven door smoothly, without any noise.

Dehydration

Great food, always at hand

Dried fruit, vegetables, herbs and meat can be easily prepared at home. Dehydration is possible on up to 5 levels at the same time, which saves time and energy.

Yoghurt

A simple way to healthy stuff

A special function enables healthy yoghurt to be prepared at home. Automatic temperature and time settings provide optimal conditions that create homemade yoghurt in around 3 hours. This function requires the use of additional Gorenje accessories.

DC+ System

The DynamiCooling system efficiently cools the oven exterior (or housing) to prevent any damage caused by high temperature. In ovens with the DynamiCooling+ system, the heat sensors regulate the cooling of the oven exterior walls until they reach a temperature of 60 °C. This is particularly convenient in ovens with the pyrolytic cleaning function which works with extremely high temperatures.

UltraCoolDoor

Special triple or even quadruple glazing isolates the oven, making it even safer for children and pets. The heat is kept inside, optimising energy consumption by stopping heat escaping from the oven.

SuperSize

More spacious ovens allow you to cook a larger quantity of food – not only because of even air circulation at all levels, but also because of the 46cm wide baking trays in both standard and compact ovens. Innovative solutions allow a larger interior and the oven width is fully used. There is more space on each baking tray and the superior technology makes sure the food is cooked evenly on all levels.

TelescopicGuides

Smooth running telescopic guides provide a perfect overview of the process on all levels. This means safer and easier removal and cleaning. Gorenje ovens feature fully pulled out guides on three levels in Superior line. During the pyrolytic cleaning, they should be removed from the oven.

PerfectGrill

The best baking results are achieved with a combination of larger and smaller heaters, where the latter is positioned inside the larger one. The smart positioning of the heaters allows optimal heat distribution and provides the ultimate baking results every time, so food is crispy on the outside and soft on the inside. A variable heater combination can use either the inner or outer heater, or both at once. In advanced models, the heater is movable for easier cleaning and maintenance.

AutoRoast

The AutoRoast function first heats the oven to 230°C. The food is roasted for 30 minutes and then the temperature drops to the set level. A smart combination of time and temperature creates ideal roasting conditions. As a result, meat is crispy and well done on the outside and perfectly soft and tender on the inside.

MeatProbe

By controlling the temperature inside the meat, the MeatProbe manages the entire process and even activates the alarm when the time is right.

TouchFree coating

All stainless steel surfaces are coated with a special TouchFree film that prevents fingerprints markings, leaving the surface always shiny and making cleaning much easier.

FastPreheat

The oven reaches a temperature of up to 200°C in just 6 minutes, saving 30 % of the time needed by standard preheating. This comes in handy for recipes that require a preheated oven. A light and sound signal informs when the temperature is right.

SlowBake

SlowBake bakes food at low temperatures for up to 6 hours. Due to the long preparation periods, meat and fish are softened but retain their juiciness, aroma and nutrients.

THE WORLD'S GENTLEST TREATMENT FOR VITAMINS

Combi steam ovens

Cooking is an enormously complex process. Here many different things happen and countless circumstances collide. It takes a lot of scientific knowledge and years of development to come up with features and functions that are able to treat food not only as a robust energy source but also as a delicate source of vitamins, minerals, fibres and, of course, smells, tastes and pleasures. Gorenje combi ovens thus include a promise of healthy food, food made with respect for all its valuable ingredients and with a focus on the needs of the body. Gorenje steam ovens include standard and compact models.

WaterTank

Water at hand

The large, practical and elegant water tank is easily accessible and can be refilled even during the cooking process, without ever interrupting it. The 1.3l tank is smartly positioned for easier handling and designed to offer more space and prevent spilling. The capacity is sufficient for the longest steaming programmes. It can be easily dismantled and cleaned in the dishwasher.

PureSteam

No water, just steam

Gorenje combi steam ovens feature an excellent steaming performance that produces steam without any drops of water. Gorenje steam ovens are completely free from water in the oven cavity, thanks to the steam generator which extracts water from steam, leaving it completely clean. A cloud of pure steam is distributed all over the oven, without any drops of water that could spoil the food, making it soggy. It is also perfect for defrosting since warm steam evenly surrounds the food without creating hot spots.

MultiSteam 360°

A holistic approach to steaming

The same ventilation system used in conventional ovens, MultiFlow 360°, is used in steam ovens. After the steam enters the oven cavity through multiple openings, a special fan distributes the steam evenly, giving the food a soft and tender

Descaling

Limescale is not a problem

The descaling function operates automatically. When needed, it reminds the user to run the descaling process. After a special descaling solution is added, it takes only 1 hour to complete the process.

feel. One water tank is enough for the entire cooking process so no additional opening of the oven is needed, saving time and energy and improving the overall steaming results.

NOTHING BUT PLEASURE

Coffee machines

Perfect coffee is a serious challenge. Coffee beans need to be ground carefully, water temperature and the pressure needs to be set with precision, milk has to be warm enough and foamed to perfection. Nevertheless, a coffee cup shouldn't be cold either. Gorenje coffee machines will make mornings more enjoyable. Thought out coffee making process will extract the optimal flavor and create the enchanting smell that will bring a perfect start of the day.

CoffeeBean

Easy mornings

The coffee bean container is easily accessible as it can be pulled out. When needed ground coffee can also be used instead of beans. When the machine runs out of coffee beans, a warning will appear on the display.

EasyMilk

Creamy milk foam always at hand

Gorenje coffee machines feature a large milk container for cappuccino or latte, both can be prepared with desired amount of milk. A large milk container allows several cups of hot milk to be made without the need to refill. It is easily removable and can be simply pulled out and stored in the refrigerator until the next time you need it.

AutoCappuccino

From cappuccino to latte, in a second

The AutoCappuccino feature forces the water through ground coffee beans in a way that extracts the full aroma and creates truly genuine flavour. The desired level of milk foam can be set.

GrindingLevels

From dark beans to aromatic coffee

Coffee tastes best when made with freshly ground coffee beans. Gorenje coffee machines offer 9 different grinding levels, from super fine to extra coarse. The leftover pulp is automatically dispensed.

A MULTI-TALENTED OVEN

Microwave ovens

A microwave oven is an indispensable tool in any modern kitchen. It allows preparing tasty and healthy food to support you in your life on the fast lane. Advanced technology makes sure the food is evenly thawed or heated. In addition to microwaves, these appliances also allow cooking with grill or hot air.

Thus, a built-in microwave oven can also be used as a conventional oven. Needless to say, they are equally impressive on the outside. They are designed to match the rest of Gorenje's built-in family of appliances.

Inverter Technology

Gentle treatment for tastier food

Because of Inverter technology the energy is evenly distributed instead of pulsating. As a result, the food retains its initial structure, including its vitamins, minerals and fibres. The advantages of the even energy distribution are particularly

welcome when reheating or defrosting, and when cooking liquids. The overall microwaving time is shorter, which lowers energy consumption as well.

Stirrer Technology

Trays of all sizes are welcome

The Stirrer technology permits a standard-size baking tray to be placed in a microwave oven. The oven's entire width is used, saying goodbye to conventional turntables and uneven heating. The advanced microwave distribution system heats the food uniformly across the entire volume. Stirrer technology is available in both combi and standard microwave ovens.

MultiUse

Built-in combined and microwave ovens deliver all the advantages of microwaves, hot air, and grill. The five-level microwave power setting speeds up the cooking process while the hot air makes sure the food is well done. Combined operation, using grill and hot air at the same time, leads to excellent results when cooking large chunks of white meat, while grill and microwave combination will speed up roasting smaller chunks of meat, baking pizzas etc. Built-in microwave oven can also be used as a conventional oven.

AquaClean

Due to completely new enamel in all lines of new Gorenje ovens, AquaClean function has been significantly improved. AquaClean offers great assistance in cleaning of the oven cavity. All it takes is to pour half a litre of water into a baking tray and turn AquaClean on after each baking. In just 30 minutes, the results are visible on the entire surface and the baking trays. Stains and grease are softened and can be wiped away more easily and the oven stays spotless.

Smooth door

Microwave oven door is free from any notches or edges that could harbour impurities. The interior glass panel is removable. Such design allows keeping the door clean even with simple wiping.

EXPERIENCE COOKING IN STYLE

Hobs

Whether preparing a meal for yourself or cooking for the whole family, Gorenje induction hobs deliver a truly streamlined cooking experience every time. With a myriad of finely tuned features that simplify your interaction with the cooking surface, preparing meals has never been more simple, intuitive or convenient.

AreaFlex

Bigger cooking surface

Two vertical cooking zones can be connected into one, creating large cooking surface. It allows evenly cooked or grilled food in bigger pots and pans.

AutoDetect

Instantly detects pot position

Hob automatically detects the pot position after turning it on, activating just the right cooking cone, single or connected, depending on the pot size. This happens within first 10 seconds after switching on the hob or anytime later on after manually activating the function.

StepZone

Intuitive cooking

This function connects two cooking zones into one, but with different power level presets. It mimics how the old cooktops on fire worked, when you just pushed the pot out on a minimal heat, keeping your food warm while preparing something else.

Delete function

Turn off the settings with just one press

This function is especially useful when you're cooking more dishes at once. When you need to turn off either one cooking zone, or AreaFlex with IqGrill and setted timer, just press X and you are done. No more countless presses.

ChildLock Pro

Always safety first

ChildLock Pro function is made specially for families with small children. Leaving the kids in the kitchen unattended, has never been safer since this option prevents them turning on the hob. In more advanced models this function can be activated in

custom setting mode, which will automatically lock the hob at every switch-off. Otherwise you can lock the hob by pressing the symbol.

Groove

Unique intuitive control

Groove is a special and unique element which directs and naturally limits finger movement when sliding the control bar. It adds an aesthetic element to the hob and the outcome is amazingly designed hob which promotes easy, quick and more intuitive use.

StayWarm

Staying perfect for the latecomers

The StayWarm function keeps food at a constant temperature of 70°C until the time is right to serve the meal. The food retains its original flavour and temperature until it is served.

IQprogrammes

Smart and flexible

IQcook system can be used on all cooking zones for which you can select different cooking programmes with perfect time and temperature settings. From now on boiling, simmering, grilling, warming, melting and defrosting are hassle free.

IQsimmer

A cooking marathon, made incredibly easy

IQsimmer offers a simple way to prepare dishes that require longer cooking times with slow warming up or cooking at a lower, constant temperature. Ideal for cooking dishes such as goulash.

IQgrill

Perfectly grilled steak

IQgrill makes grilling thrillingly simple, even with very little or no oil. It offers four levels of doneness and prevents food from burning. A simple way to the tastiest and healthiest barbecue ever.

IQboil

No drop leaves the pan

Perfect choice for dishes that require a large amount of water such as soups and pasta. IQboil will bring the contents of the pot to the boil and then maintain the boiling temperature. You can choose between light, moderate, and heavy boil.

TimeAssist

Keeps your cooking on track

It helps you keep record on how long you are already cooking. No more keeping an eye on the watch or wondering when you'd started preparing the meal. Now you can check the time directly on the hob.

StopGo

Taking a break, anytime

The StopGo function stops the cooking and continues with the same settings after being re-activated.

PowerBoost

Cooking on fast-forward

The PowerBoost function intensifies heating, resulting in significantly less heating-up time. It takes just 5.7 minutes to boil 2l of water from 15°C to 90°C, which is half the time of regular HiLight hobs.

Recall

Reactivate your settings

This function is very helpful, when you turn off the hob unintendedly. You have 5 seconds to recall your last used settings on the hob, which becomes very handy when you're cooking more than one dish. Within 5 seconds after you accidentally turned off the hob, turn on the hob again and within next 5 seconds press StopGo function.

PERFECT TASTE WITH SPARK OF CREATIVITY

Gas Hobs

Cooking like a chef can be simple. All it takes is a creative spark as Gorenje gas hob will take care of everything else. With its big surface, powerful burners and advanced features, it offers

support for your wildest cooking endeavours. Ignite your inspiration and surprise your loved ones with perfect home-made dishes.

ChefBurners

More powerful and efficient cooking

New high-efficiency ChefBurners provide more efficient gas consumption and enable faster and eco-friendlier cooking. Different sizes of burners give you full flexibility, while their user-friendly positioning enables easy and safe cooking.

BigSurface

Plenty of space for every pan or pot

Enlarged cooking surface (up to 20%) and longer distances between burners offer plenty of space for all sizes of pans and pots. Sleek and flat design allows easy sliding and using very big pots without disturbance, with perfect stability for all your cooking adventures.

WokBurner

Powerful cooking, great authentic taste

New wok burner with special shape of gas crown directs flame directly to wok and enables even more powerful cooking with up to 4.0 kW power. Asian cuisine, vegetables and other dishes have never been so crisp and delicious, yet done so quickly.

Cast iron ProGrids

Strong, stable and durable support

Massive and elegant cast iron ProGrids are extremely stable and resistant even to the highest temperatures. They bring superior stability, durability and user-friendly design to your kitchen.

XtraSurface

Effortlessly shiny

Special brushment of inox enables less scratches and fingerprints on the hob surface. At the same time flat and modern design of the driptray makes it quick and easy to clean and maintain.

One-hand ignition

Simple and convenient

One-hand burner ignition brings extra comfort and easy control to your gas hob. To activate the gas burner simply press the knob down and rotate it to desired level with one hand while your other hand is free. Quick, simple, and efficient.

GasStop

Full stop, full safety

If during cooking the flame gets extinguished for any reason (wind, liquid spillage), there is no need to worry. Automatic GasStop flame failure device will cut off the gas supply immediately to ensure full safety.

 **Wok Cradle**
For really authentic results

Massive and stable wok cradle fits perfectly to the grid and offers safe and convenient use of the wok for best cooking results.

 **Coffee Reducer**
Made for perfect morning rituals

Small diameter grid enables using even the smallest pots safely and comfortably. Just right for making that perfect cup of coffee for one.

Knobs - design and ergonomoy
Perfect grip

Gas hob knobs are ergonomically designed and user-friendly, with big and well visible pointers. Sophisticated materials offer perfect grip. Innovative construction of the hob ensures optimal placement of the knobs for easy handling while keeping the area around them safe and cool.

Gas on glass

Beautiful and effective

The range of Gorenje gas hobs also includes a selection of glass hobs. Besides giving you a professional chef's control, they also bring extra advantage of easy cleaning and an appealing design. Glass hobs featuring four gas burners are available in black and

white, with standard or 'diamond' placement of burners. Cast iron pan supports are extremely stable and highly temperature resistant. Optimal cooking performance is guaranteed; and with the smooth, sheer surface, cleaning is simplicity itself.

Flush installation

Sleek and elegant

The new generation of gas hobs enables flush mount installation, which means smooth transition between the hob and the worktop. It is easier to clean and brings a modern, stylish look to your kitchen.

Variety of options

For all tastes

For different desires and needs new gas hobs are available in various dimensions, colours and materials, including stainless steel, tempered glass and glass-ceramic hobs. The new gas hobs also feature improved materials, which makes them more scratch-resistant, easier to clean and extends their lifetime.

A HELPING HAND FROM ABOVE

Hoods

Gorenje hoods bring two in one as they are technologically advanced tools in the form of superbly designed objects. They are a perfect companion to a modern lifestyle – they contribute to a healthier living environment, efficiently remove bad smells and work silently and reliably. Gorenje hoods are made of top quality materials and offer the best user experience whilst cooking, cleaning or simply just watching them.

AdaptAir

No smell. Just air.

Patented AdaptAir technology ensures completely even air suction over the entire hood surface. Steam, smells and impurities no longer enter the kitchen air.

Polyurethane filter

Benefits of polyurethane foam

Unique AdaptAir and aluminium grease filters are enhanced with a special polyurethane foam that eliminates up to 98% of all grease particles and other impurities. At the same time, the hood maintains its absorption efficiency.

LED light

See what you're cooking

LED lighting provides excellent and highly efficient illumination of the cooking hob and represents an important aesthetic and functional element in the kitchen. Its useful life is thirty times as long as that of conventional light bulbs, and it saves up to ten times as much power.

AdaptTech Automatic fan operation

A special sensor, when in automatic operating mode, senses the level of impurities or steam, humidity and gases and responds suitably. It automatically adjusts the fan speed accordingly or, when it is no longer needed, even completely stops the fan.

P.A.S. System Smart, targeted extraction with less noise

Innovative perimetric aspiration system (P.A.S.) directs its extraction power to the edges. This approach reduces energy consumption and noise at the same time. As a result air extraction is considerably more silent and efficient.

TouchFree coating Shiney and fingerprint-free finish

All stainless steel surfaces are coated with a special TouchFree film that prevents fingerprint markings, leaving the surface always shiny and making cleaning much easier.

Timer and refresh Always fresh and punctual

Special advantages of new Gorenje hoods include setting the timing for automatic switching off and the refresh function which is activated every hour, refreshing the air for 10 minutes.

Advantages of new hoods with smart glass design

New Gorenje hoods with smart glass design bring great visual appeal to your kitchen, along with many advantages. High quality glass is easy to clean and at the same time offers an additional space for spices or small objects on the sides.

SmartCurve Better capturing steam and grease

New models of Gorenje hoods feature new innovative shape with specially curved glass which captures more steam, grease and odours as standard design hoods.

Controls

Cleverly placed above the glass surface, the controls of the hood are protected from grease and stay clean and perfectly operating for a long time. They are easy to reach and use (no bending below the hood cap), simple to clean and stay cold during the cooking.

LED-lights

Smart design and placement behind the glass surface, the LED-lights stay protected from grease and therefore require no cleaning. Simply wiping the glass below them will do the trick.

Polyurethane grease filter

These models of hoods use one big polyurethane filter which is easy to install and replace with just a simple click.

GUARDIANS OF VITAMINS

Built-in refrigerators and fridge freezers

Although it is not used for cooking, Gorenje refrigerators are the hub of every kitchen. They are tasked with a simple mission – make sure your favourite food is always available. But Gorenje refrigerators can do much more. They feature smart technologies to mimic the conditions similar to those found in nature, which keeps the food fresh, tasty, and full of vital nutrients for longer. On the inside, they are thoughtfully organized to allow the user optimum view and plenty of space for storage of even larger amounts. On the outside, their superior design introduces a welcome visual accent to any home. Last but not least, they are notoriously charming with their silent and economical operation, and convincing durability.

 **CrispZone with VitaLight and SmartHumidity**
Just like garden-fresh

One of the largest fruit and vegetables bins in the market, CrispZone extends the freshness of your produce with low temperature, automatic humidity control and special light. SmartHumidity keeps the humidity in the drawer at optimum level

at all times thanks to a special membrane which automatically lets out excess moisture. VitaLight maintains the natural ripening process to retain vitamins and keep freshly picked or bought fruit and vegetables fresh and crisp for a longer time.

 **IonAir with DynamiCooling**
Keeps only the pleasant aromas

Air enriched with extra negative ions preserves taste and removes unpleasant odours, while the advanced fan system equalizes the temperature throughout the entire refrigerator and

evenly distributes ionized air, ensuring any type of food can be placed on any shelf.

AdaptTech

A fridge freezer that recognizes your habits

This smart system was devised to maintain the optimum temperature in the refrigerator regardless of how frequently you open the door. When the door is opened, the temperature suddenly rises and the food is exposed to a thermal shock which in turn causes it to perish sooner. The refrigerator continuously monitors and analyzes the way you use it. Thus, it can predict when you will open the fridge door and just before you do, it decreases the temperature by 1 or 2 °C to make sure constant temperature is maintained, ensuring the food stays fresh and full of nutrients.

NoFrost DualAdvance

Optimum double air circulation system

Intensive circulation of cool air in the freezer compartment reduces the humidity level and prevents accumulation of frost on the food and ice on the freezer walls. In the refrigerator compartment, it provides optimum food storage conditions. This leads to optimum cooling and freezing control, each adjusted to the respective processes in the two separate parts of the appliance.

- No more freezer defrosting
- Frozen food will no longer stick together.
- Quality frozen food
- Better view of the contents
- More space
- No exchange of odours between the freezer and refrigerator compartment
- Fresh food will not dry out and remain fresh longer.

FreshZone

Fresh as if straight from nature

The drawer with the lowest temperature in the refrigerator is ideal for storing meat, fish, fruit, and vegetables. It will preserve the food's freshness, aroma, colour, and flavour for much longer.

 **LedLight**
Well-arranged and efficient

LED lighting in refrigerators provides excellent and highly efficient illumination. Its useful life is thirty times as long as that of conventional light bulbs, and it saves up to ten times as much power.

 **MultiAdjust shelves**
Endless storage possibilities

These sturdy glass shelves can be very easily adjusted in position, inserted into the fridge or taken out, thereby allowing you complete freedom to adjust the fridge interior according to your specific needs. The tempered glass shelves are highly durable and will securely carry even larger amounts of food.

 **MixBox**
Keep your fridge neat and tidy

This shallow drawer will store all your smaller items, like spreads, butter, fish cans and snacks making sure your fridge is organized and food doesn't stay forgotten past its due date. Its slide in-and-out function ensures easy access to its content.

FastFreeze Rapid freezing

The FastFreeze function freezes the food at $-24\text{ }^{\circ}\text{C}$ to preserve most of the minerals in the food. After approximately 2 days, the function is switched off automatically and the freezer compartment temperature returns to the initial setting. And in case you forget, smart sensors make sure the function is switched on at the right time.

XXL SpaceBox Enough space to store a turkey

This freezer compartment drawer is the largest in the appliance and it is ideal for storing large items like a turkey, several pizzas, or even cakes.

SuperCool Rapid cooling after weekly shopping

The intensive cooling function drops the refrigerator temperature to $3\text{ }^{\circ}\text{C}$, which is lower than usual by nearly a half. Combined with large refrigerator compartment volume, this temperature is ideal for rapid cooling of food after major shopping trips. After six hours, the function is switched off automatically and the refrigerator compartment temperature returns to the initial setting. And in case you forget, smart sensors make sure the function is switched on at the right time.

MultiBox Multi-functional, practical box

The multi-purpose bin with a lid in the refrigerator door can be used for storing cheese, onions, and other food with a pungent smell. It keeps the food fresh and protects it from drying, while the silicone cover can be used as an egg or ice tray.

 **HiddenSpace**
Extra storage out of sight

The HiddenSpace compartment provides extra hidden storage for cans or similar items underneath the CrispZone drawer.

 **Deep door bottle shelf**
Secure storage for bottles

Refrigerator door has plenty of storage for the largest glass or plastic bottles. A special fence holds the items in place to prevent it from moving and damage while the door is opened or closed.

 **Bottle holder**
The right place for bottles and cans

In Gorenje refrigerators, bottles do not take up the space that could be conveniently used to store other items in the refrigerator door racks or on glass shelves; the designated bottle holder ensures optimum use of storage space.

 **FrostLess**
Less ice, more energy saving

Improved insulation effectively reduces the accumulation of frost on the food and ice in the appliance interior. This means less tedious defrosting and a lower electricity bill.

Flat hinge

Easier door opening and closing

The heavy-duty hinge allows storing heavier items in the door bins, as well as opening the door to an angle of 115°. This allows a clearer look of the interior and makes loading the fridge and taking the food from it more convenient as the door won't keep closing. If the door is left ajar, the hinge will fully close it to save power.

Compressor featuring valve technology

Separate temperature adjustment for refrigerator and freezer

Unlike conventional single-compressor models, those featuring a single compressor with a valve allow separate temperature setting for the refrigerator and freezer compartment. Moreover, cooling for the refrigerator compartment can be switched off while the freezer compartment continues to operate.

A++

Top energy efficiency

All Gorenje fridge freezers are highly energy-efficient. Excellent thermal insulation and door sealing, inverter compressor, and electronic or mechanical control efficiently reduce power consumption. Fridge freezers with the A++ energy efficiency rating use 40% less power than those in the A class.

Side-by-side layout

The perfect couple for your kitchen

The side-by-side layout option allows you to maximise the use of available storage space within a limited surface area and fully adapt it to your needs, as you can combine different appliances (fridges, freezers and even wine chillers).

FRESH – NO MATTER WHAT

Freestanding refrigerators and fridge freezers

Gorenje IonGeneration fridge freezers are designed for maximum freshness. Their IonAir with MultiFlow 360° technology continuously refreshes the air to simulate the natural microclimate and provide perfect storage conditions. With smart, user-friendly functions they seamlessly adapt to your lifestyle. No matter how often you open the fridge door, AdaptTech maintains the optimal temperature and keeps your food in perfect shape, while the NoFrost Plus cooling system prevents the accumulation of frost and eliminates defrosting.

IonAir with the MultiFlow 360° function

Ideal microclimate on every shelf

Advanced technology in the refrigerators emulates the natural process of ionization to keep the food fresh longer. Negatively charged ions generated by the appliance continuously refresh the air to mimic a natural microclimate, thus creating the ideal

environment for fresh food. The MultiFlow 360° ventilation system evenly distributes the ionized air through 14 ventilation slots to maintain constant temperature on every shelf.

AdaptTech

A refrigerator that recognizes your habits

This smart system was devised to maintain the optimum temperature in the refrigerator regardless of how frequently you open the door. When the door is opened, the temperature suddenly rises and the food is exposed to a thermal shock which in turn causes it to perish sooner. The refrigerator

continuously monitors and analyzes the way you use it. Thus, it can predict when you will open the fridge door and just before you do, it decreases the temperature by 1 or 2 °C to make sure constant temperature is maintained and that the food stays fresh and full of nutrients.

Without ADAPTECH

With ADAPTECH

NoFrost Plus

No more tedious defrosting

One of the best cooling systems in the market, installed in the freezer compartment, prevents the accumulation of ice and frost to keep the power consumption low, while in the refrigerator compartment, it maintains an ideal microclimate for fresh food. Circulation of ionized air prevents the food from drying out and retains its vitamins and minerals.

SensoTech

Advanced control via LED display

Advanced control via LED display allows accurate settings of temperature in the refrigerator and the freezer compartment from the Superior line. Features like XtremeFreeze, FastFreeze, SuperCool, and EcoMode can be switched on by a gentle touch of the relevant symbol. A special signal light and an audible signal warn the user of a sudden increase of the temperature in the appliance.

 **CrispZone drawer featuring HumidityControl**
Just like garden-fresh

CrispZone is one of the largest fruit and vegetables bins in the market. Low temperature and the option to adjust the humidity extend the freshness of your produce.

 **FreshZone**
Fresh as if straight from nature

The drawer with the lowest temperature in the refrigerator is ideal for storing meat, fish, fruit, and vegetables. It will preserve the food's freshness, aroma, colour, and flavour for much longer.

 **SuperCool**
Rapid cooling after weekly shopping

The intensive cooling function drops the refrigerator temperature to 3 °C, which is lower than usual by nearly a half. Combined with large refrigerator compartment volume, this temperature is ideal for rapid cooling of food after major shopping trips. After six hours, the function is switched off automatically and the refrigerator compartment temperature returns to the initial setting.

MultiBox

Multi-functional, practical box

The multi-purpose bin with a cover in the refrigerator door can be used for storing cheese, onions, and other food with a pungent smell. It keeps the food fresh and protects it from drying, while the silicone cover can be used as an egg or ice tray.

XXL SpaceBox

Enough space to store a turkey

This freezer compartment drawer is the largest in the appliance and it is ideal for storing large items like a turkey, several pizzas, or even cakes.

FastFreeze

Rapid freezing

The FastFreeze function freezes the food at -24°C to preserve most of the minerals in the food. After approximately 2 days, the function is switched off automatically and the freezer compartment temperature returns to the initial setting.

SlotIn

No limits for door opening

Owing to the functionality of opening the refrigerator door at a right angle, all shelves and bins can be fully pulled out. This solution is ideal for refrigerators placed against a side wall, or adjacent to a countertop or another appliance.

FROZEN CORRECTLY

Upright and chest freezers

Life on the fast lane and the wish for the best food at any time require much more from an upright or chest freezer than providing space with low temperatures. Gorenje can help out with this. Smart technology in Gorenje upright and chest freezers will make sure the microcrystals formed during the freezing process will not damage the cells in the food. As a result, it will retain its vitamins, minerals, and – most importantly – its flavour. Thus, strawberries picked in the summer will taste just as sweet in the winter, and the ready-made lunch will, although frozen, wait for when you need it in the best shape. The interior is thoughtfully designed to allow neat storage of larger amounts of food.

Recommended storage time in the freezer

TYPE OF FOOD	TIME
fruit, beef	from 10 to 12 months
vegetables, veal, poultry	from 8 to 10 months
venison	from 6 to 8 months
chopped or ground meat	4 months
bread, pastry, cooked meals, lean fish	3 months
entrails	2 months
smoked sausage, fatty fish	1 month

NoFrost

No more tedious defrosting

Intensive circulation of cool air eliminates moisture from the upright freezer. This prevents the accumulation of frost on the food and ice on interior walls and keeps power consumption low. As a result, the usage of the storage capacity is optimal, and defrosting and cleaning of the interior are no longer necessary. Packages or pieces of frozen food will not stick to each other, keeping your food in the freezer neat and tidy.

XXL SpaceBox

Enough space for an XXL turkey

The largest drawer is ideal for storing large items like a turkey, several pizzas, or even cakes.

FastFreeze

Rapid freezing

The FastFreeze function freezes the food at -24 °C to preserve most of the minerals in the food. After approximately 2 days, the function is switched off automatically and the freezer compartment temperature returns to the initial setting.

SensoTech Advanced control

Accurate temperature control via an LED display allows constant temperature control. A dedicated light, combined with an acoustic signal, will warn you of any temperature increases in the appliance.

SimpleUse Comfort guaranteed

Thoughtfully placed light in the chest freezer lid will provide a clear view, and the movable baskets allow easy access to your frozen food. The massive heavy-duty spring-loaded metal hinge will keep the cover partly or fully open so you don't have to hold

FrostLess Less ice, fewer problems

A combination of improved insulation and advanced technology in the chest freezer effectively reduce the accumulation of frost on the food and ice in the appliance interior. This means less frequent defrosting and a lower electricity bill.

it with your hand. Advanced solution that equalizes the pressure to prevent vacuum after the lid is closed allows you to open the chest again immediately after you have closed it.

Control and safety

Mechanical control unit is located at the lower front side of the freezer chest. Temperature settings knob and FastFreeze function on/off key are complemented by two signal lights and a high temperature alarm light.

A+

Improved cooling system provides excellent conditions for attaining the top energy classes. Chest freezers with the A+ energy efficiency rating use 20% less power than those in the A class.

Possibilities of locking

Since the chests are often placed outside the apartment, some models are fitted with a lock. The chest can also be fitted with casters to allow it to be moved around easily.

A PLEASURE FACTORY

Side by side fridge freezers

Big expectations and high standards require adequately sized refrigerators and freezers. To this end, Gorenje is offering a gallant giant that can easily accommodate a week's stock of food for a large family and prove equally hospitable when hosting a social evening or a party. The refrigerator interior is conveniently and clearly organized, and chilled food is always readily available. One special feature of these refrigerators is the double door in which a mini ice cube maker can be integrated. This will save you from any awkward moments or frustration even in case of surprise visits or large gatherings, and during hot summer days.

The luxury of freshness

Enough space for large families as well

The luxury of freshness, convenient double door, appealing design, and environmentally friendly power consumption. A very spacious Side by Side refrigerator with innovatively designed interior offers enough space even for a week's worth of supplies of a large family. The food can be stored on glass shelves, in large drawers, or on deep shelves on the inner wall of the door.

NoFrost

No more tedious defrosting

Intensive circulation of cool air eliminates moisture from both the freezer and refrigerator compartment. This prevents the accumulation of frost on the food and ice on interior walls and keeps power consumption low. As a result, the usage of the storage capacity is optimal, and defrosting and cleaning of the freezer interior are longer necessary. Packages or pieces of frozen food will not stick to each other, keeping your food in the freezer neat and tidy.

SuperCool

Rapid cooling after weekly shopping

The intensive cooling function drops the refrigerator temperature to 3 °C, which is lower than usual by nearly a half. Combined with large volume, this temperature is ideal for rapid cooling of food after major shopping trips. After six hours, the function is switched off automatically and the refrigerator compartment temperature returns to the initial setting.

FastFreeze

Rapid freezing

The FastFreeze function freezes the food at -24 °C to preserve most of the minerals in the food. After approximately 2 days, the function is switched off automatically and the freezer compartment temperature returns to the initial setting.

FULLY QUALIFIED TO DO YOUR JOB.

Smartflex dishwashers from Gorenje

The new SmartFlex dishwashers are inspired by modern lifestyle. Because our everyday life can be quite dynamic we created a generation of dishwasher that takes the load of your shoulders with the help of many advanced features.

The interior is designed in such a way that every dish and piece of cutlery has its place, no matter the shape or size. The baskets are equipped with highlighted movable elements and a customizable basket layout for easy loading, while the cutlery can be perfectly organized on a special tray where it can thoroughly dry out after washing. Furthermore, the SmartFlex dishwashers offer you a variety of helpful functions: a wide range of fast washing options that are among the best in the market and can take care of any load in no time, automatic opening of the door for releasing steam and letting the dishes dry out and the dissolving of bad odors through the natural process of ionization.

16 place settings

As flexible as your time will be

The SmartFlex dishwashers offer enough space for all your needs. Three baskets enable washing up to 16 place settings at a time. The fully flexible interior allows for different loading options, the use is simple and the washing effects are perfect.

15 min SpeedWash

Clean fast so you can slow down

Imagine throwing a dinner party and the dishes from the main course are cleaned in the time it takes to serve dessert. A quick 20 min programme with the SpeedWash function will do your dishes in only 15 minutes. Perfect for handling the volume of dishes created by having multiple guests in the house.

AutoProgramme

Party for two or twelve – the dishes will be spotlessly clean

Sometimes all you need is to give the glassware a light rinse, on other occasions your dishwasher is full of heavy dishes left over from Sunday lunch. The advanced sensor technology will always adjust your dishwashing programme to clean dishes perfectly with optimized water and energy consumption. You do not need special programmes for glass or intensive cleaning – the single AutoProgramme will adapt to all your needs.

ExtraHygiene

Always a clean baby bottle

This option prolongs washing time and increases temperature for 5°C which in combination with intensive programme enables temperature of 75°C, which eliminates most of bacteria. The program that mimics the sterilization process is made for families with babies, for cleaning baby utensils and bottles.

Total AquaStop

Do not worry about water spillage

With the AquaStop safety feature, the dishwasher can be safely left to operate at night as well as in your absence. In case of a leakage or flooding, AquaStop automatically cuts off the water supply while the pump siphons the residual water out of the dishwasher basin. AquaStop remains fully functional over the lifespan of the appliance.

Hot water connection

Higher temperature, lower consumption

Gorenje dishwashers can also be connected to hot water (max. 70 °C) instead of cold. Choosing a hot water connection cuts programme times and reduces the dishwasher's electricity consumption. An environmentally and budget friendly solution for your family.

auto TotalDry
Takes care of itself

After the washing cycle, the dishwasher door automatically opens just slightly to let out the excess steam. This allows fresh air to reach the crockery so the washed items, like plastic dishes, dry completely. Excellent for quick drying with low energy consumption.

IonTech
No smell no worries

Everyone is familiar with the bad smell that comes from a half loaded dishwasher that has been loading for a few days. The advanced IonTech technology built in Gorenje dishwashers operates on the principle of the natural process of ionization, which naturally eliminates odours and keeps your dishwasher fresh, even when it is full of dirty dishes.

9,5L water consumption

Saves time and water

Washing dishes by hand, it takes up to 100l litres of fresh water to clean 12 standard place settings. Washing them in a dishwasher would take 10 times less. The more advanced models are equipped with a special water tank that reduces water consumption to only 6,9l of water per washing cycle.

A+++ low energy consumption

Top energy efficiency

Thanks to the new Inverter PowerDrive motor, optimized programmes and smart solutions like TotalDry Gorenje dishwashers combine perfect cleaning and drying results with very low energy consumption.

Inverter PowerDrive

Remarkable power, high efficiency

The new powerful brushless Inverter PowerDrive motor with speed regulation assures high performance with a notably quieter function, low energy consumption and a longer lifespan.

SmartLook

Dishwasher tailored to your kitchen

The special sliding door mechanism allows for mounting the dishwasher in any type of kitchen cabinet, no matter what the required decorative door length or the kickplate style is. In addition, the built-in anti-siphon enables installing of the dishwasher at an ergonomic height. With no gaps under the door!

**LIFE IS
COMPLEX.
LET'S MAKE
LAUNDRY
SIMPLE.**

**NEW WaveActive
WASHING MACHINES
AND TUMBLE DRYERS.**

We know you have better things to do than think about washing clothes. That's why we designed the new Gorenje WaveActive washing machines and tumble dryers to provide the best washing results with minimum effort. With their unique IonTech technology they remove up to 30 % more stains and reduce creasing. So you can spend your time on what's really important.

reddot award 2018
winner

ALWAYS FRESH AND TREATED WITH CARE

WaveActive washing machines

New Gorenje WaveActive washing machines use the unique IonTech technology to tackle even the toughest stains with the gentlest care. Using the power of the natural ionisation process ensures best washing results without high temperatures,

additional chemicals, softeners or other irritants, it prevents the deposit of lime scale, which prolongs the machine's life cycle. So you can spend your time on what's really important.

WaveActive drum
Sensitive treatment of any garment

The unique wave-shaped drum pattern in combination with special wave-shaped 3D ribs softens the fibres to provide the most gentle garment treatment for perfectly clean laundry with a minimum wrinkles.

IonTech
Removes 30 % more stains

IonTech uses the power of the natural ionisation process to remove impurities more effectively without high temperatures or additional chemicals. The detergent dissolves better in the water, allowing the cleaning solution to penetrate your laundry evenly. The result is 30 % more stains removed, even at low temperatures. IonTech also prevents the deposit of limescale on the heater which prolongs the washing machine's useful life.

SteamTech
Deep-cleaned and smooth garments, without softeners

Forget softener! Additional steam treatment at the end of the selected programme significantly reduces wrinkles, odours and bacteria. Your garments will be thoroughly clean, less creased and softer.

Inverter PowerDrive motor
Powerful, yet silent motor

This quiet, but very efficient motor is designed to ensure a long life of your washing machine, saving energy with each cycle.

StainExpert
The most efficient stain care

Effective removal of stains no longer requires a high temperature or additional treatment of clothing before the wash. The perfect combination of temperature, time, and water will automatically remove up to 36 types of stubborn stains from 3 main groups: fruit (oranges, tomato sauce); organic stains (fat, butter, eggs, grass) and coffee (including tea, chocolate yoghurt, pasta, make-up)

PowerWash 59'
Your favourite items always ready to wear

You will need less than an hour to wash your clothes, thanks to this quick and intensive washing programme suitable for a half load.

DoseAid
Optimal detergent dose for every load

DoseAid will always help you find the optimal dose of detergent, regardless of the amount of load you put in your washing machine, so you can rest assured you're using detergent in the most economical and healthy way.

AutoWash
Always the right programme

Can't decide which programme to choose? Just select AutoWash and your washing machine will select the best washing cycle for your load. You can relax, the clothes will be spotlessly clean, regardless of their material.

SteamRefresh
Always fresh clothes

This unique programme uses a steam generator to produce large quantities of steam, that refresh the clothes and facilitate ironing.

Simple interface
Three steps and you are ready

The easy to use interface with centrally positioned selection knob allows you to start washing in just 3 easy steps; turn on the washing machine, select the programme and press start! Without any submenus for selecting extra functions and settings, but you do have the freedom to the settings on the large touch interface, so you can be sure your garments will be washed just as you like it.

EcoEye
Energy consumption always under control

The easy to read EcoEye indicator gives you real time feedback on how efficient your chosen programme is, helping you save water and energy.

AllergyCare
Extra protection for sensitive skin

The AntiAllergy programme uses a higher temperature and extra rinsing to efficiently eliminate traces of detergent on the fabric. The allergens, that could cause an unpleasant sensation, are removed and delicate skin protected.

MORE STEAM FOR LESS IRONING

WaveActive tumble dryers

New Gorenje WaveActive tumble dryers with IonTech technology not only efficiently remove allergens and unpleasant odours, but also significantly reduce creasing. Time-consuming hours of

ironing are minimized, if not eliminated. So you can spend your time on what's really important.

WaveActive drum

Sensitive treatment of any garment

Unique wave-shaped drum pattern softens the fibres the most gentle garment treatment for perfectly dry laundry with minimum wrinkles.

IonTech

Minimize creasing. Maximize freshness

Air full of negatively charged ions dries the laundry in a way that considerably reduces creasing of your clothes. The ionizer creates an environment free of most allergens, smoke residues, pollen and the electrostatic charge accumulated during the drying process. As a result, the clothes are easier to iron and they smell fresh.

SteamTech

For smoother, wrinkle-free clothes

Additional steam treatment at the end of the selected programme will make sure your clothes are much smoother and free of allergens and bacteria. The drum is filled with steam that penetrates every fibre for softer laundry that hardly requires any ironing.

Inverter PowerDrive motor

Powerful, yet silent motor

This quiet, but very efficient motor is designed for a long life of your dryer, saving energy with each cycle.

A **Condensation class A**
Eliminates problems of excess humidity when drying clothes

In each drying cycle WaveActive dryers condense an impressive 90 % of humidity from clothes, ensuring complete dryness of your laundry and eliminating any problems of excess humidity in your home. That means 55 l of water less per year will be released into your living space, compared to tumble dryers with B condensation efficiency class.

SteamRefresh
Clothes free of unpleasant odours and wrinkles

This fifteen-minute steam treatment removes most wrinkles, eliminates any odours and refreshes your blankets, winter jackets, or any other garment, making it the ideal choice when you want to just quickly freshen up your clothes or avoid ironing.

IonRefresh
Quick refreshment for your clothes

Do you need to quickly remove odours from your clothes? With this special refresh program with ions IonRefresh your clothes will be ready to wear and almost as freshly washed in just 30 minutes.

Simple interface
Three steps and you are ready

The easy to use interface with centrally positioned selection knob allows you to start drying in just 3 easy steps; turn on the dryer, select the programme and press start! Without any submenus for selecting extra functions and settings, but you do have the freedom to the settings on the large touch interface, so you can be sure your garments will be dried just as you like it.

TwinAir Efficient drying of even the largest piles of laundry

Even the largest pieces of laundry will be soft, evenly dried and less creased, straight from the dryer thanks to this patented bi-directional air blowing system.

Dryer modes Perfect match for your needs

Our technology makes sure every type of fabric is dried in the best possible way by delivering the optimum combination of temperature, rotation and time. These settings can be further adapted with different drying modes, allowing you to find just the right combination for your current need.

Speed 40⁺ Your favourite items always ready to wear

Your laundry can be dried in only 40 minutes by optimising all stages of drying and using the inverter compressor.

AirRefresh Quick refreshment for your clothes

Special refresh program for refreshment of your clothes after sport activities or after dinner. Fresh air helps to remove odours, food and cigarette smells. In 30 minutes time your clothes are ready to wear and almost as fresh as just being washed.
