Spazio W: bath planners and their responsibility

IT'S ABOUT THE BIG PICTURE

Unlike classic booth exhibitions, Spazio W in Ludwigshafen is “a clear statement against the decoration and design crimes to which customers are still exposed in many places.” That is the view of Ragnar Karl Willer, 42, member of the founding family and who works in the company himself as a planner and consultant. The sociologist together with his colleague and interior designer, Anke Springer, developed the concept over an area of almost 500 square meters: Spazio W (loosely Italian for: Room W - W for Willer) is a clear commitment to products and manufacturers who share similar values and create things that are aesthetically and sustainably progressive. TECE products such as the stainless steel shower channel range also

belong in this category. The product, planning and implementation result in contemporary, reduced bathrooms – tailored to customer requirements.

The bathroom is a special room: it is not only the linchpin of personal hygiene, but also the place where people can find themselves. What does the trade need to offer in order to be able to design this space in an increasingly demanding world in the future? Ragnar Willer formulates the key questions for his customers: what are the foundations for a healthy, balanced life? How do you design rooms so that they meet the demands of their users in terms of health, aesthetics and functionality over the long term?

“The exhibition provides a guideline, it’s a tour and guide at the same time – for a relaxed, visually quiet life.” For Ragnar Willer, the bathroom is “the foundation for physical and mental health”.

The family business has a long tradition and with the showroom it has reinterpreted the classic workshop of craftsmanship as an inspiring platform for high-quality bathroom architecture and as an invitation to customers to engage in a special consulting concept based on many years of experience and a great deal of knowledge. The protagonist and beneficiary of this transfer of knowledge is the customer with their individual bathroom solution.

The Willer family and their team are not only united by the ideal of craftsmanship that is well-done and therefore valuable, but also by a common attitude: it’s also about the big picture. The modern bathroom, according to the concept of Spazio W, should also inspire reflection about oneself and life on this planet. The bathroom is therefore ideally suited for this perspective, because it is here that the consumption of valuable resources (energy, water) comes together with a contemplative atmosphere of self-reflection.

Interior designer Anke Springer and Ragnar Karl Willer in the planning process.

FLOOR-LEVEL SHOWERS

EVERYTHING FLOWS

Ideal for the modern shower space.

MORE FREEDOM PER SQUARE METRE.

Unbounded. Spacious. Good. In the floor-level shower, the boundaries between the shower area and floor design are blurred. As a continuous space it brings freedom of movement into the bathroom. And deconstructs barriers: because you can move within it comfortably and without stumbling. The trendy topic of modern bathroom architecture thus combines design and function for everyone – with drainage systems from TECE.

TECEdrainline

COMFORT ALONG THE LINE.

TECEdrainline frees the shower area from standard dimensions – and fulfils even the highest requirements in terms of design diversity and function.

1

Tailored variations to suit all tastes

The plethora of materials and the high-quality design of the shower channels open up new possibilities, including for demanding bathroom planning.

2

4

3

011

- 1 "plate II" version
- 2 Glass version
- 3 Stainless steel version
- 4 Natural stone version

THE MOST IMPORTANT ELEMENTS ARE INVISIBLE.

Natural stone has a very unique, unmistakable appeal that makes every bathroom into a one-of-a-kind – with zero visual disruption thanks to TECEdrainline.

Everything in natural stone

The more uniform the floor covering is, the higher quality and more spacious the room appears. The TECEdrainline natural stone shower channel completely takes a back seat in visual terms because it can be seamlessly clad with natural stone slabs. Only the narrow drain slits in the natural stone demarcate the transition.

In perfect harmony with tiles

Tiles are a critical design element in the bathroom. Drainage systems can fade completely into the background here too: thanks to the “plate” tileable channel, the shower channel can be fitted into the flooring almost seamlessly.

013

Fine – through steel

Authentic, long-lasting, high-quality – design grates made of polished or brushed stainless steel set clear accents.

IMPRESSED.

For us, good design isn't just a question of aesthetics but also one of functionality. With success: TECEdrainline has already been used over 1,000,000 times for the highest hygiene demands.

Innovative against odours: the two-layer membrane odour trap minimises the evaporation of the sealing water in the siphon while acting as a vermin barrier at the same time.

1

Trapped: the hair trap effectively prevents water pipes becoming obstructed by hair.

3

Stays clean: the anti-capillary edge prevents the ingress of dirt and soap residues below the tiles.

015

Hygienically clean: the easy to clean steel body is seamless – no screws or threaded parts.

This means neither hair nor dirt can accumulate.

2

Runs optimally: the internal gradient improves the flow of water, which in turn minimises deposits in the channel body.

The TECEdrainline Modular System

The TECEdrainline range is a modular system that lets you realise the optimum shower channel solution for almost any shower area. You can combine the individual components any way you like: from the cover to the channel in the adjusted length through to the right drain.

TECEdrainline total package

A TECEdrainline shower channel always consists of:

- A A cover
- B A channel (here TECEdrainline-Evo with sealing sleeve)
- C A drain

016

A Cover

Nominal length vs. visible dimensions

TECEdrainline shower channels come in various nominal lengths of 700 to 1500 mm*. Depending on the construction type, they come with an all-around sealing flange in different widths that lets you seal them into the structural shell. That's why the visible dimensions in the final tiled floor are slightly smaller compared to the actual installation dimensions in the shell (compare also graphic and table on the next page).

* TECEdrainline-Evo only available up to nominal length 1200 mm

B Channel

The TECEdrainline drain channels that have been tried and tested a million times are available in various versions. If in doubt, the trades involved can help coordinate which one to use.

a = min. installation length, shell construction
 b = min. installation width, shell construction
 c = visible length after installation
 d = visible width after installation

Nominal lengths 700 / 800 / 900 / 1000 / 1200 / 1500*

Construction type	a [mm]	b	c	d
TECEdrainline-Evo	693 / 793 / 893 / 993 / 1193	111	651 / 751 / 851 / 951 / 1151	71
TECEdrainline with stainless steel flange	711 / 811 / 911 / 1011 / 1211 / 1511	150	651 / 751 / 851 / 951 / 1151 / 1451	71
TECEdrainline natural stone channel	735 / 835 / 935 / 1035 / 1235 / 1535	152	646 / 746 / 846 / 946 / 1146 / 1446	68

* TECEdrainline-Evo only available up to nominal length 1200 mm

C Drain

- 1 Sound decoupling, insulation
- 2 Edge insulation strips
- 3 Drain pot
- 4 Shower channel
- 5 Drain line
- 6 Screed
- 7 Combined sealing
- 8 Thin-bed tiling

The drain trap is selected according to the drainage capacity required and the available floor installation height. The height for the floor insulation and the drain line gradient should also be considered when making a selection. If the available installation height is insufficient then the shower area can also be designed as a platform with dressing area in the room.

- h₁ Height of anti-capillary edge (15 mm) and floor covering (including sealing and tile adhesive)
- h₂ Height of drain incl. shower channel, up to screed upper edge
- h₃ Height for sound insulation or insulation and drain line gradient

Drain	h ₂ * [mm]	Performance [l/s]
Extra flat	53	0.5
Flat	80	0.8
Standard	105	0.9
Max.	133	1.4
Vertical	52	1.3

* When using the TECEdrainline-Evo shower channel height h₂ each + 2 mm

Verified safety:
 TECEdrainline shower channels and drains meet the independently tested sealing standards of Seal System.

TECEdrainline design covers

Set accents as you wish: with covers of polished or brushed steel or glass. The version with tileable channel or natural stone base is almost invisible.

TECEdrainprofile

SMART FORMAT – OPTIMISED FLOW.

Good design: TECEdrainprofile impresses as an elegant recessed solution – combined with clever details for perfect hygiene.

2

More design freedom

As individual as the shower area: larger format tiles are currently all the fashion in bathroom design. The shower profile made of polished or brushed steel optimally adjusts to the width of the shower area. The tile mirror is not disturbed by the drainage and the overall aesthetic picture is retained.

3

1

- 1 Flush-to-wall installation
- 2 Polished stainless steel
- 3 Brushed stainless steel

EASY TO CLEAN.

022

Smooth surfaces instead of tricky edges

Large-format materials not only make a visual impact in the shower area, but also make cleaning effortless. Simply wipe through and the modern shower area remains beautiful for a long time. This enables design to be something that can be effective in everyday life.

Neatly solved

How do we picture a shower profile? Attractive, practical and with properties that decidedly simplify cleaning. Like TECEdrainprofile.

With self-cleaning effect

Thanks to the internal gradient the water and potential dirt is transported directly into the drain at the centre of the profile.

By the simplest means

Rinse, wipe, done: a simple cloth is enough to clean the low-maintenance stainless steel shower profile.

With push function

The profile lid can be folded up with a press of the finger and removed without help – for simple cleaning.

TONE IN TONE.

New refined surfaces are finding more and more applications in the world of bathrooms. TECEdrainprofile in eight current variants and matching toilet flush plates from the TECESquare series complete the overall visual concept.

Feminine: Red Gold

Fittings, shower profile and flush plate in warm red gold underline the bathroom design as an atmospheric boudoir with a feminine touch.

The visible stainless steel parts of TECESquare metal and TECEdrainprofile are finished with PVD technology. This gives the coated surfaces an excellent colour quality and shine as well as being extra abrasion and scratch-resistant.

Fine: Gold Optic

Classic ambiances in a modern interpretation benefit from the noblest of all colours in the clearest of lines. Radiant as Polished Gold Optic or as a matt version Brushed Gold Optic.

025

Rich in contrast: Black Chrome

A strong counterpoint, for example, to naturally reduced design approaches in Scandinavian style: shower profile and flush plate in the PVD surface variants Black Chrome. Shown here in the Brushed Black Chrome variant, also available as Polished Black Chrome.

The TECEdrainprofile range

With two drains and eight shower profiles, the TECEdrainprofile range covers a range of installation variations. And adjusts precisely to any niche width in the process: The profile can be shortened on both ends for millimetre precision, recessed installation.

TECEdrainprofile total package

A TECEdrainprofile shower profile always consists of:

- A A stainless steel profile
- B A drain

The matching Seal System sealing sleeve is included in the scope of delivery. It seals safe and tight with a simple click.

026

A Shower profile

The stainless steel profile can be shortened on both sides and be adapted precisely to the dimensions of the shower profile.

A special feature: the internal gradient

The shower profile has an internal incline to improve water drainage and the self-cleaning effect. This ensures the water flowing out of the area is reliably guided to the central drain.

TECEdrainprofile

Length	800 mm	900 mm	1000 mm	1200 mm	1600 mm

027

B Drain

The TECEdrainprofile drain is simply fixed to the floor and is flush with the surface when the screed is levelled.

- h₁ Height of shower profile / floor covering 8 - 25 mm (incl. adhesive bed)
h₂ Height of drain to upper edge of screed
h₃ Height for acoustic protection and insulation and drain line gradient

Drain	h ₂ [mm]	Performance [l/s]
Flat	65	≥0.46/≥0.53*
Standard	95	≥0.6/≥0.8*

* With 10/20 mm build-up height in accordance with DIN EN 1253-1

TECEdrainprofile has also been tested according to the safe, certified Seal System sealing standard – successfully!

TECEdrainpoint S

TO THE POINT.

Whether placed as a central drainage element or close to the wall – TECEdrainpoint S cuts a good figure in any bathroom and impresses as an innovative and versatile system solution.

1

2

3

4

029

Truly special!

Whether small or large tile format: in point drainage, the necessary gradient areas integrate harmoniously into the tiling.

The floor-level covers are offered as design grates made of stainless steel or as tiled versions. For perfect integration in the floor covering – especially with natural stone and stoneware.

- 1 Tileable channel "plate"
- 2 Frameless tile base
- 3 Stainless steel design grate
- 4 Stainless steel design grate "quadratum"

THE INNER CENTRE.

TECEdrainpoint S unfurls its full potential even in the centre of the room: as a floor-level drain that combines form and function at the highest level.

Simply hygienic

The drain body of TECEdrainpoint S consists of plastic and comes with an odour trap that can be easily removed and cleaned at any time. The design grates then can be placed back loosely over the drain body or screwed in – with the latter being a preferred version for the public sector too.

The TECEdrainpoint S modular system

Small range, countless applications: the desired drain set can be compiled from a simple modular system. Drain, drain top, grate and accessory can be selected and combined as you wish. Alternatively, six drain sets for the most common applications are available in the complete package.

TECEdrainpoint S total package

A TECEdrainpoint S point drainage always consists of:

- A A design grate
- B A drain top with grate frame or a tileable channel
- C A drain

A

Tile base "frameless"

Also available with membrane odour trap, fire protection set for direct mounting on the drain and Seal System sealing sleeve.

Combining design and sustainability: Annette Katrin Seidel and son Franz Philip.

Laurichhof: design hotel with inspiring showrooms

A DREAM WORLD TO TRY OUT

None of the 27 suites at the Laurichhof design hotel in Pirna (Saxony, Germany) is the same as the other – and each one boasts specifically selected design objects. But the hotel wants to offer more than casual design inspiration. The rooms are designed as showrooms: Guests can buy what they like and take it with them or have it delivered. Behind the hotel concept is a family that devotes its life to beautiful and sustainable things: Annette Katrin Seidel, Uwe Seidel and their son Franz Philip Seidel are designers and architects. The showroom concept not only promises a high experience value, but also aims to persuade people to invest in long-lasting and hence sustainable interiors.

“Furniture pieces by renowned designers are usually somewhat more expensive, which is why many people look to test the product in detail first before

making such an investment,” says Annette Katrin Seidel, explaining the added value of the hotel concept. “As it’s not possible to try out the furniture in everyday life anywhere else, we offer our guests the opportunity to test all the furniture live before buying it.” The rooms vary in furnishing styles from romantic to modern. Furniture and equipment in the suites and public rooms have been staged in a way that is both cinematic and functional. This awakens the urge to “want to have”: from furniture to room furnishings to interior design services, the guest can have it all.

“It pays to invest in high-quality designer furniture, as many classics are timeless, excellently crafted, hard-wearing and durable,” says Annette Katrin Seidel. “The environmentally damaging process of shipping and returns is also reduced if I can experience the product

effect in real life instead of having to rely on online representations.” The showroom principle also applies to the bathroom and its fittings, such as the shower channels, toilet flush plates and cisterns from TECE. Each product has been deliberately selected and is a defined part of the philosophy. The unique concept is therefore a showroom for building owners to experience – including individual advice.

The restaurant and hotel feature the services of regional construction companies and well designed, sustainable furnishings. A weather station that communicates with the irrigation, lighting, cooling and heating system of the entire facility, together with its own combined heat and power unit, ensures a high level of energy efficiency. Charging stations

for electric vehicles and e-bikes as well as a washing area for bicycles encourage guests to move around locally in a CO₂-neutral manner. The hotel restaurant focuses on regional and seasonal ingredients. The choice of hotel location in the natural landscape of Saxony is also designed to highlight the fact that one’s own country has many undiscovered treasures to offer, and that not every great holiday has to come at the price of a flight and a negative CO₂ balance.

Last, but not least: the thoughtful concept creates a unique appearance. Anyone who has been here will not forget it and will tell others about it. Uniqueness creates sustainable added value – including at Pirna.

TOILET FLUSH PLATES

THE GEOMETRY OF COMFORT

Diversity for the toilet flush.

Toilet flush plates

ATTRACTIVE FLUSHING.

As the visible operating element for the invisible technology behind the wall, our flush plates combine form and function in sophisticated ways.

“The more discreet the design of the bathroom ceramics, the more the flush plate sets the tone visually. There's enormous design potential here for the toilet area!”

SEEN FROM THE OUTSIDE.

Classic puristic, elegant minimalistic or individually accentuated: the material makes the difference – in the feel too. You'll find the right material for your style with us. And for your senses.

As clear as glass

Timeless elegance for design-oriented bathrooms: Glass brings a new aesthetic into the toilet area.

Stainless steel

Fine visuals with unique charm: Stainless steel integrates decoratively into the wall design and enhances it.

Plastic

The neutral all-rounder for every bathroom: Plastic is as tried and true for bathroom design as it is future-proof.

Unique

Soft, opaque, indestructible: FENIX NTM® is an innovative material that inspires designers, interior architects and bathroom planners.

Flat, flatter, flush-mounted

Wall-mounted or even flush-mounted, the extra-flat and compact flush plates integrate harmoniously into the wall.

As required: top actuation also possible

Different bathroom, different requirements: with TECE flush plates, the flush actuation not only works from the front but also from above.

Clever in the detail

The TECE flush plates can be combined with all types of TECE cisterns and are optionally equipped with an insert chute for cleaning tablets – for invisible toilet cleaning and hygienic operation.

When individual taste meets huge design variety, choosing the optimum flush plate is only a few clicks away: with the flush plate configurator at www.tece.com!

TECEsquare

FULL OF CHARACTER.

Clear lines, geometric design, extra-flat construction: the ambitious concept of TECEsquare makes full use of the aesthetics of stainless steel, glass or chrome.

043

Pleasant to touch

You can really sense the high-quality button mechanics of the TECEsquare in your finger tips with every actuation. Three fine joints on the clearly structured surface characterise both buttons for the flush – a wide button for the full flush and a small one for the partial flush.

Flawless

The brushed stainless steel version of TECEsquare is equipped with an anti-fingerprint coating.

The perfect combination: the urinal flush plate TECEsquare.

BRIGHTLY PRESENTED.

046

TECEsquare flush plates with glass surface appear as light and elegant as if they were floating on the wall. They can also be integrated flush-mounted for an even more modern aesthetic – thus wall and flush plate blend into one another.

047

Timeless diversity

We offer facings made of white, mint green or black glass to match the ambience of your bathroom. You can set additional accents with the buttons: various colours, materials and structures are available for you to choose from.

We also offer you the matching urinal flush plate in the glass version too.

TECESquare – The facts

The TECESquare flush plate is suitable for TECE cisterns with front or top actuation.

At just 3 mm and with integrated installation frame, TECESquare metal is extra flat when incorporated into the wall.

TECElux Mini

SIMPLY APPEALING. DAY AND NIGHT.

How can functional design look? With TECElux Mini, for example, where aesthetics and function blend together perfectly – and a design plate transforms into a functional element overnight.

Harmonious unity: TECElux Mini and TECEfilo glass, the urinal electronics with infrared recognition.

051

More than just beautiful

TECElux Mini, the electronic real glass flush plate, captivates on multiple levels simultaneously. With its high-quality, reduced design with plane glass surfaces and flat structure. With its approach sensor, which activates the button silhouette lighting and thus also functions as an orientation aid at night. And with its individual programmability – for individual functions such as the hygiene or safety flush.

Completely touchless

A casual hand movement in front of the sensor suffices and TECElux Mini actuates the flush touch-free. The flush is then confirmed by the brief illumination of the corresponding button. Anyone preferring the traditional approach can also actuate the flush by lightly tapping the button field.

TECElux Mini

CLEAR JOY.

A surface that feels high-quality and clean – and really is: TECElux Mini sets accents for the highest hygiene requirements.

052

Simply fresher

The safety glass plate made of tough, low-maintenance safety glass only stands out slightly from the wall. It can also be integrated into the wall, however – another hygiene benefit in addition to the touch-free actuation.

TECElux Mini – The facts

TECElux Mini is an electronic glass flush plate for TECE cisterns with front actuation and an actuation height of approx. 1 m. The integrated sensor recognises when somebody approaches the toilet and then illuminates the contours of the sensor surfaces through the seamlessly smooth glass facing. The flush is actuated touch-free or by means of a light tap on the button area.

The flat safety glass flush plate sits very close to the wall.

White, white buttons,
Item no. 9240960

Black, black buttons,
Item no. 9240961

TECElux Mini can also be flush-mounted on the wall with a special installation frame.

Programmable functions – with separate programming remote control:

- Sensor recognition range
- Hygiene flush
- Activation time
- Safety flush
- Illumination brightness of the display

Please remember: when planning TECElux Mini, the accompanying 12 V transformer and a power connection must also be fitted.

TECEvelvet

GENTLE. WARM. MATT.

Incomparably soft to the touch, yet robust and hygienic. This toilet flush plate will touch you.

055

High-tech – soft feeling

The secret is in the material. FENIX NTM® is a material whose unique structure diffuses light rather than reflecting it, giving TECEvelvet its extremely opaque appearance. Ideal for use in wet rooms: acrylic resins form a closed surface and prevent dust and water from penetrating.

Low light reflection,
extremely matt
surface

Soft feel

Protection against
fingerprints

Perfect fit:
the TECEfilo-Velvet
urinal flush plate.

CROSSING BORDERS.

Material in material: with FENIX NTM[®], entire bathroom worlds can be designed. And when used flush-mounted, TECEvelvet virtually merges with the wall cladding.

He belongs to the Who's Who of international design. With TECEvelvet, Konstantin Grcic has now also brought fresh thinking to toilet flush plates.

TECEloop

THE ORIGINAL.

Nature cannot be improved.
That's why we prefer to work directly
with the original.

061

Everything genuine!

Every cover from the TECEloop modular system is made from what it says. We don't use imitations; we use real oak, real concrete, real marble and real slate.

TECEloop

MAXIMALLY MINIMAL.

Design stripped back to the essential, completely free colour design: TECEloop gives your powers of imagination unimagined creative freedom.

063

Show your colours!

The TECEloop modular system: An individual flush plate is made up of a cover and buttons. A wide range of materials and colours ensures the right cover to cater for every taste and every interior.

The TECEloop modular system

The TECEloop modular system can be used to individually combine the covers and push-buttons. With a choice of seven glass colours and four covers made of wood, marble, concrete or slate, as well as seven different button colours, a wide range of possible combinations is possible. TECEloop flush plates are suitable for front or top actuation.

Buttons

Cover

All glass variants offer the unique option of flush-mounted installation thanks to a special installation frame.

TECE flush plates can simply be swapped at any time.

TECEloop

DESIGN FOR ALL.

It doesn't always have to be marble. Our design classic also comes in a robust, easy-care plastic version.

It's worth taking a closer look here: for an even more harmonious look, all TECEloop flush plates can optionally also be installed flush.

TECEloop plastic design

The TECEloop plastic flush plates are particularly flat and can also be fully flush-mounted.

A separate installation frame is available for flush-mounted installation.

070

TECEnow

SIMPLY GOOD.

Clear forms, flat structure – with TECEnow we prove that good design doesn't have to be a question of materials.

071

With corners and edges

Generous buttons characterise the appearance of the extra-flat plastic flush plate. Wall-mounted or flush-mounted, it gives the design of the wall an added refined look – without making itself the centrepiece.

Also good: the matching
urinal flush plate TECEnow.

072

TECEnow – The facts

TECEnow is a toilet flush plate made of plastic for TECE cisterns for front or top actuation.

For flush-mounted assembly of TECEnow it's necessary to combine an installation frame and a spacing frame, which both can be ordered separately.

TECEnow installation frame

TECEambia

THE CLASSIC.

The first toilet flush plate from TECE – and still current: the curving lines of TECEambia harmonise with many modern toilet ceramics.

The TECEambia flush plate and the matching urinal flush plate can be used anywhere – even in places where the focus is on hygiene. That's why the version with antibacterial properties is recommended e.g. for hospitals, senior citizen or care homes as well as public sanitary areas: here, the growth of germs on the surface is effectively inhibited by silver ions.

TECEambia – The facts

The toilet flush plate made of plastic can be used for front or top actuation. Rattling noises can be reliably avoided during actuations thanks to the rubber buffers on both sides.

 In the antibacterial version, silver ions in the surface material significantly reduce the spread of germs.

TECEsolid

STRONG IMPRESSION.

Flush plates in public and semi-public areas need to be robust. With TECEsolid, they also look good.

The TECEsolid series features flush plates in an extremely robust design. Its flat construction is characterised by the harmoniously rounded edges and high-quality stainless steel finish. The attractive price makes these plates especially attractive for use in project business. But thanks to their optical qualities they also work wonderfully in challenging private bathrooms.

TECEplanus

THE RESISTANT PIECE.

078

With one or two buttons, compact dimensions and elegant design, TECEplanus suits every ambience. And can withstand a lot: the durable stainless steel means the flush plate is constructed to be especially long-lasting and thus also suitable for challenging application conditions. This makes it the ideal choice both for public sanitary areas, restaurants or hotels. That's because the robust material makes TECEplanus vandal-proof and a concealed screw means it's also protected against theft.

The TECEplanus urinal flush plate is also available in a version with IR sensor.

TECEplanus – The facts

TECEplanus is a toilet flush plate for front or top actuation. Rubber buffers on both sides prevent rattling noises during actuation. In the version with infrared sensor TECEplanus is suitable for touch-free or manual front actuation and an actuation height of approx. 1 m.

TECEplanus is available for the dual-flush system. It screws in covertly and is thus effectively secured against theft and vandalism.

URINAL FLUSH PLATES

PERFECT FIT

Tailored variants for urinal flush.

TOUCH-FREE.

The most elegant form of hygiene: TECEfilo actuates touch-free thanks to infrared recognition – and also lives up to the special requirements of public sanitary spaces.

The special solution

Special features such as a configurable pre-rinse, a hygiene interval flush and a pause function reduce water consumption and improve hygiene. The anti-fingerprint coating on the stainless steel version is also offered especially for use in public sanitary facilities. But no matter whether stainless steel, glass or plastic: thanks to the deliberately minimalist design, TECEfilo aesthetically harmonises in an appealing way with many toilet flush plates from the TECE range.

Hygienic, refined, high-quality:
TECEfilo and TECEsquare metal.

Light, elegant, modern:
TECEfilo and TECEsquare in glass.

Attractive – including the
price-performance ratio: TECEfilo
and TECEnow in plastic.

Innovative and robust:
TECEfilo Velvet and TECEvelvet.

Contactless duo:
TECEfilo Solid and TECEsolid elec-
tronics.

TECEfilo – The facts

TECEfilo sits very flat on the wall at 4 mm (stainless steel version), 5 mm (plastic version) or 7 mm (glass version).

Stainless steel

Plastic

Glass

TECEfilo can also be installed flush to the wall in the glass and plastic versions. This requires a special installation frame that is available separately.

Programmable functions – for reduced water consumption and more hygiene with no loss of comfort

A magnetic key lets you set the flush time, pre-flush, hygiene interval flush and a pause function.

- Hygiene flush: automatic flush actuation 24, 78 or 168 hours after last use
- Pause function: automatic reduction of the flush volume when using the urinal in intervals of less than two minutes

NOA Design Agency, Aachen

GLASS FASCINATION

The fascination with the material glass probably also leads back to its visual and haptic closeness to crystal and diamond. Whether as jewellery, lead crystal or as plain glass: it breaks up the light like gemstones. Its even polish, its equally cool and flawless surface make glass one of the finest, most durable quality raw and construction materials. Transparent glass is even the only material in architecture that manages to make

rooms look bigger – just like its silver-clad relative, the mirror.

For over 7000 years people have known that you can turn the natural material sand, ash and chalk into glass. People have long since been fascinated with the material's special aesthetic: its transparency, its shine and shimmer, its colourfulness, its plain and flawless surface, but also its ability to hygienically

MATERIAL WITH HISTORY – AND A FUTURE: GLASS

Today, glass is far more than a simple material in construction. It works as a platform for digital interaction, it can be a screen and keyboard in one – thus an inexhaustible array of perspectives for application unfold. An interview with the designer Michael Lammel (NOA design agency, Aachen), a specialist on the material and its possibilities.

Why glass in the bathroom?

Glass is an archaic material that enjoys the highest confidence in terms of cleanliness and hygiene – we drink out of glasses. In the bathroom it can be used to achieve spaces that are high-quality, spacious and easy to clean. Moreover, it's a future-proof material because it can transport light, sound, heat and information.

What can glass do in the bathroom of the future?

Glass supports many trends in the bathroom: digitisation, individualisation and health provision.

Sensors can be hidden behind a glass surface that respond to approach, gestures or touch to actuate functions or equally integrated displays can provide individual information. Glass can however also function as a transmitter of infrared heat, as a resonator for loudspeakers or as a projection surface. There's a lot of this already today.

Can you give examples?

Like the TECElux toilet flush plate: when you enter the room it's simply a decorative glass plate incorporated into the wall. It only reveals its function when you approach it because then a sensor automatically activates the button field lighting. That means you're not flooded with functions, but rather you receive them exactly when you need them – that's incredibly relaxing.

store fluids and foodstuffs, because it is completely neutral in contact with potable water and also easy to clean.

With the advances in its manufacture and processing, glass first developed into a window, then into a building material that is almost impossible to contemplate not having as a design element in architecture. Large glass facades are today a style feature of modern architecture. Floor-deep, frameless window fronts, glass balconies or transparent sliding doors form the connection between living space and natural environment.

In addition, various refinement processes have ensured that the once fragile material has today become hard, robust, variably translucent, printable and safe. Its insulation and thermal insulation properties are impressive. New technologies have also vastly expanded the malleability and process capability of the material such that there are practically no limits to the design possibilities.

The haptic and optic appeal of the glass surface is always the same, no matter where it comes from. This means glass elements can be used universally in buildings. In the bathroom, for example, glass light switches, shower divider and toilet flush plate made of glass harmonise perfectly with one another, even if they've been procured from different manufacturers. They are also frequently colour coordinated.

Its flat surface thus makes glass the material of choice everywhere where a high standard of hygiene is required. Flush plates made of glass on the toilet or urinal set aesthetic highlights, for example – are highly low-maintenance and easy to clean. And glass is even present in the bathroom where you don't expect it: bathroom items made of ceramic and steel enamel such as washstands, toilets or bathtubs are coated with a glass-like layer, making the stuff into a truly original material in the bathroom.

WE DON'T JUST THINK IN BLACK

Going beyond just bathrooms, TECE also offers a suitable range of intelligent helpers for the ambience of your home.

The perfect addition: TECEfloor design thermostat

Developed exclusively for the TECEfloor underfloor heating programme, TECEfloor controls the temperature precisely. With an outer diameter of 105 mm, the thermostat is recognised as a discrete design element – and that's how we design it.

No need to hide it: TECEfloor design RTL box

Decentralised flush-mounted individual room controller – or at TECE: design control with real glass cover and beautifully designed aluminium thermostat knob.

One line: the TECEfloor design RTL box visually matches various toilet and urinal flush plates designed in glass – such as the TECElux Mini.

AND WHITE.

Design language of glass: the TECEfloor design thermostat adds to our range of glass flush plates with elegance and style.

TECElux

IT'S ALL ON THE INSIDE, RATHER THAN ON THE OUTSIDE

The toilet terminal.

- 1 Height-adjustable seats: the seat height can also be adjusted in retrospect in a few moves – by up to 8 cm.
- 2 Upper glass facing with two options: flush actuation manually with push buttons or electronically with touch-free sensor fields.
- 3 Insert chute for cleaning tablets for the cistern.

- 4 Ceramic odour filter – can also be retrofitted.
- 5 TECE cistern with proven dual-flush technology.
- 6 Lower glass facing for connecting all conventional wall-mounted toilets – including rimless toilets and shower toilets.

TECElux toilet terminal

TIMELESS BEAUTY AND INVISIBLE COMFORT.

Highlight on the wall, high-tech behind the wall: the TECElux toilet terminal combines innovative, comfort-boosting toilet functions and hides them discreetly behind an elegant glass front. TECElux does this so intelligently that it has already been awarded multiple times.

The bathroom is ready for the innovative toilet terminal. Are you ready too?

DESIGN **PLUS**

TECElux offers two actuation versions: electronic flush actuation via a sensor seamlessly integrated into the glass plate or mechanic flush actuation at the push of a button.

OPEN FOR THE FUTURE.

TECElux offers you diverse opportunities for a unique toilet terminal. Installed from the start or retrofitted at any time – just the way you want.

TECElux in combination with round toilet ceramics.

TECElux in combination with square toilet ceramics.

TECElux in combination with a shower toilet – all cables and water lines can be laid invisibly!

Always the right seat height: TECElux makes it possible to retrospectively adjust the seat height by 8 cm – continuously and without having to remove the ceramics. The glass facing simply moves with the ceramics.

The glass facing conceals the large inspection opening, which allows quick access to the technology at any time – for example to the insert chute for cleaning tablets.

Help in the dark: the night light function

The glowing button silhouettes function as orientation guides at night. These are activated by the individually adjustable approach sensor.

Not a chance of bad air: the new ceramic-Air air purification system with ceramic odour filter sucks up odours where they start – and feeds the filtered air back into the room without any heat loss.

The TECElux modular system

Three components make up the TECElux system:
the module is covered by an upper and lower glass plate.

A

TECElux complete package

A TECElux toilet terminal always consists of:

- A An upper glass flush plate
- B A lower toilet attachment plate and notches for different power and water connections
- C A TECElux module

The flush plate offers various actuation options.

B

The attachment plate has hidden connection options for practically all toilet ceramics available on the market – from the standard solution to a rimless toilet or shower toilet.

C

A total of three TECElux modules are available that are each fitted with a dual-flush technology cistern and offer different functions depending on the version, e.g. height adjustment and a ceramic odour filter.

Simply combined

The TECElux product configurator at www.tece.com will help you put together the TECElux toilet terminal. You can choose from various glass surfaces, actuators, functions, ceramics and bathroom designs – for perfect integration in the existing bathroom ambience.

Tip for the future: if a power connection is fitted during the planning of TECElux, functions such as sen-Touch and ceramic-Air or even a shower toilet can also be retrofitted later on.

TECEone

REFRESHINGLY DIFFERENT.

The toilet with shower function.

Shower toilet trend?

THE CLEANEST FEELING.

A washstand, a shower, a toilet – and with a little luck and space: a bath tub. This is how the European bathroom meets the basic requirement for cleanliness and hygiene. Looking beyond the limits of imagination and country borders shows: the toilet can be a place for body care too. Primarily when a pleasant, warm jet of water gently cleans the intimate area. This not only increases our feeling of hygiene, but our actual hygiene too. With TECEone we are breaking pattern of thought behind hygiene comfort and raising it up to a new, pleasant level.

THE MOST NATURAL THING IN THE WORLD.

Cleaning with water – as pleasant as it is effective. So why not in intimate hygiene too? With its shower function, TECEone brings pure refreshment after using the toilet. Simple, comfortable and the purest pleasure every time!

Sleek elegance with two buttons

The temperature regulator on the left of the ceramic lets you intuitively adjust the shower jet to a temperature that leaves you feeling good up to 38 °C.

The water regulator on the right allows you to adjust the water volume to your needs. The shower arm is pushed out by the water pressure and you can get started.

Hygiene needs no power

In contrast to other shower toilets, TECEone functions entirely without power. The shower function is simply controlled via water pressure and draws warm water directly from the pipe.

The evolution of freshness

A soft, warm water jet that cleans gently and leaves nothing but the purest freshness – this is how TECEone fulfils the very human need for cleanliness and comfort. And with its simple operability and uncomplicated technology in a modern design.

TECEone impresses:

www.tece.com or on the
TECE YouTube channel.

TECEone

COMFORT IN ITS MOST BEAUTIFUL FORM.

TECEone meets all requirements – also in terms of ergonomics and contemporary facilities.

Hygiene 2.0

The rimless design makes TECEone especially easy to clean. The shower arm even cleans itself: through fully automatic rinsing before and after each cleaning run. Another advantage: during the pre-rinse the cooled water in the pipe can be flushed out.

127

Comfort for the ears too

Contemporary hygiene, contemporary facilities: the soft-close drop function stops the toilet lid from folding down with a bang.

Suits you

The inner qualities of the TECEone family shine through – and it also looks good. With its timeless, elegant design TECEone can integrate into any bathroom ambience, combining well with the existing bathroom furnishings. Whether it's for hot water, cold water or even without shower function, because no electronics have to be accommodated, it is just as space-saving as a normal toilet.

TECEone is available in hot water, cold water and without shower function versions.

This is TECEone

Rimless toilet ceramics with integrated shower function for comfortable personal cleaning using water. The shower function uses the building's hot and cold water connections, and thus requires no electricity.

The dimensions of TECEone are especially compact when compared to shower toilets from other manufacturers: The dimensions are comparable to standard toilet ceramics.

TECEone toilet ceramics with shower function, Item no. 9700200

TECEone toilet ceramics with shower function, cold water, Item no. 9700201

TECEone toilet ceramics without shower function, Item no. 9700204

TECEone toilet seat with lid, Item no. 9700600

TECE offers matching upgrade sets for assembling the water connections.

GET TO KNOW US BETTER.

TECE provides expertise in further areas of competence. Visit www.tece.com where you can find detailed information about the company, products and services.

Company

Close to you – The corporate brochure emphasizes TECE's innovative culture and describes the family company's philosophy.

Design & Creation

Freedom in design. The themes of Space & Architecture, Individuality & Design and Function & Technology are aimed primarily at architects and bathroom planners.

Project & Planning

Reliability in terms of time, legal aspects and economic efficiency. This brochure is intended for planners, architects and investors.
