Introduction to the Teka Group

From the Teka group's headquarters in Spain, its business areas range from domestic and professional kitchen equipment, stainless steel beverage and gas containers, bathroom and kitchen tapware electronics, and telecommunications equipment.

Teka numbers among the worlds leading sink and built in appliance brands, manufacturing high quality home appliances, commercial equipment and kitchen sinks.

Teka is one of the largest sink manufacturers worldwide and the only technology manufacturer in today's market offering a fully integrated range, we can fit your entire kitchen end to end with Teka brand equipment; i.e fridge, microwave, coffee machine, oven, hob, dishwasher, washing machine, drier, kitchen sink and faucet.

The group employs over 5000 people worldwide, with an annual turnover exceeding US\$1.5 billion. The Teka Kitchen division has thirteen factories in Europe, two in America, and two in Asia supplying a sales network in 125 countries over 5 continents.

Stainless steel is the most popular material for kitchen sinks today. It's important to know that not all stainless steel sinks are the same. Most significant is the chrome and nickel ratio. Chrome increases hardness and wear resistance, and provides the stainless steel with lustre and durability. Nickel increases strength and provides shock resistance.

As one of the largest European users of stainless steel, Teka sinks are manufactured from stainless steel with an 18% chrome and 10% nickel (18/10) content. Often referred to as surgical grade stainless, this is the preferred ratio for premium quality stainless steel sinks.

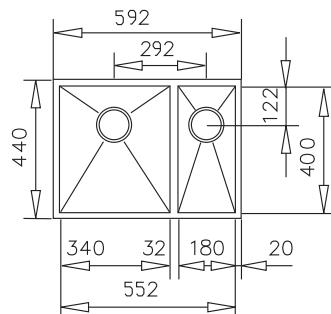

The heart of every kitchen
