# The Teka ECO commitment

The move towards a more sustainable development model for the world will involve all aspects of society. The Teka Group takes a sincere and pro-active approach to ecologic responsibility.

Teka is committed to creating sustainable values for the environment in which we operate. We want to help build a fairer, healthier and more prosperous community for both present and future generations.

Our corporate management strategy is based on a principle of harmonising economic success and social prosperity with environmental values.

From 2002 onwards, Teka has implemented a green line strategy to promote a healthy environmental attitude throughout the organisation. This process has involved all value added activities in all our production processes and systems.

## Material supply

Teka's core businesses revolve around stainless steel, which is 100% recyclable. Always trying to reduce the impact of our products and processes on the environment, our R&D department is constantly seeking to use materials that are easy to recover for use again in the future, and trying to avoid where possible the use of materials that cannot be recycled.

## Production

Working within ISO 14.001 guidelines, Teka has been able to reduce the energy required to produce each unit of product by 25%. At the same time a global reduction of 30% in water usage has been achieved, whilst reducing CO2 emissions by 20% compared to the year 2000.

## Distribution

Teka has established a new logistic centre to concentrate on the delivery of the large volume goods, avoiding the inefficient radial network around Europe. New agreements with ports closer to the main factories, together with a logistic rationalisation helped us achieve a reduction of 15% in the cost associated to the movement of goods.

## Use

Teka has also been working hard on reducing the amounts of energy used by the appliances themselves. This has led to the production of a new generation of appliances that use less water, less energy and reduce CO2 emissions. In the past these principles had only been applied to premium/high-end products. Most of the Teka appliances are now A or A+ or A++.

## Recycling

The recycling system is not only maintained during the production process - it is handled by approved and specialised companies. The same recycling system is guaranteed once the life of the products come to an end, as every product is evaluated in terms of estimated cost of recycling from the outset.

## Certification

Our factories work with ISO 14001 Environment Management Systems to provide assurance to management and our customers that they are in control of the organisational processes and activities having an impact on the environment and to assure employees that they are working for an environmentally responsible organisation.

## R&D

The green commitment is our first consideration even before the production process starts. It must be introduced at the design stage of the product. The engineering of standard products is constantly monitored to assure ecologic improvements and any new product developments are managed by our green line committee. For more information visit [www.ecoteka.org](http://www.ecoteka.org)

# Taking Care of your **Teka** stainless steel Sink

Timeless, Elegant. Like fine silver, its beautiful finish improves with age and use. But this does not mean we can neglect the care of the essential kitchen item. As a rule, stainless steel's best friend is cold, clean water or a mild detergent solution, applied with soft sponge, rinsed well and wiped dry. Here are some of the products or elements that can damage your sink:

## **Chlorides**

Chlorides are found in almost all soaps, detergents and cleaning products and can be damaging to stainless steel. They are water soluble, however, if you rinse away residues after each use, a weekly scouring is all that is needed to keep your sink looking bright and shiny.

## **Scratches**

Like most metallic surfaces, your stainless sink will scratch. Don't worry, these are simply usage marks will eventually blend into the overall finish of the sink.

## **Knives**

Your sink is designed to serve as many things but not as a chopping board. This type of use will cause deep scratches in its surface, and will also blunt your knives. For an additional work area, choose from our wide range of chopping boards.

## **Water Quality**

The quality of your water can affect the appearance of your sink. When water has a high iron content, a brown surface stain can form on the sink giving the appearance of rust. Also, in areas with a high concentration of mineral or over softened water; a white film may develop on the sink. To combat these problems we suggest you wipe the sink dry after each use and give it a more thorough clean each week using a recommended abrasive product, such as peak polish. Contact KKS for more details.

## **Foods**

Foods containing high levels of salt should not be allowed to dry on the sink surface. Rinse your sink thoroughly after use.

## Designer Inset Sinks

### SI-TEX60B

Texina Reversible Sink

Outer dimensions: 980 x 500mm

Base unit: 600mm

Reversible

Pop-up waste kit

**TOTAL €349.00**

### SI-TEX45B

Reversible Sink

### Teka Sinks

This price guide represents a sample of the wide range of sinks & Taps available from the Teka Group.

Please consult your Kitchen Specialist if you require a sink that is not featured in the Best Sellers Price Guide or visit [www.teka.co.uk](http://www.teka.co.uk) to view the complete range of products.

## TITAN

Titan disposers have the TORQUE MASTER Balanced Grinding System - modern permanent magnet motors that are smaller, faster, and more efficient than the old, slow and bulky induction motors. These high speed, high torque motors produce speeds up to 2700 RPM and virtually eliminate jams before they can happen.

Titan is the only disposer with BIO SHEILD, a unique antimicrobial agent permanently molded into 'wet' components of the disposer to eliminate bacteria caused odors. It also inhibits the growth of a wide range of micro organisms.

**SPECIAL OFFER**

T-660

1/2 Horse power  
Partial sound installation

**TOTAL €205.00**

T-560

1/2 Horse power
